For more info or support contact [CustomerService@tandemkross.com](mailto:CustomerService@tandemkross.com)

---

**Attention:** Before you begin, be certain that the magazine is removed and the chamber is clear.

---

You will need a 1/8" drift or allen wrench to depress retainer slide cap

---

1. Remove the slide from the frame and remove the recoil spring and barrel

---

2. Depress retainer slide cap with allen wrench. The cover plate can start to slide with spring and detent compressed.

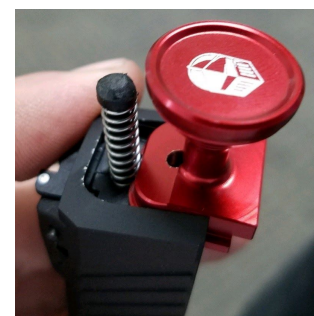

---

3. Slide the plate down being careful not to allow the spring and detent to shoot out. It is best to aim spring in a safe direction prior to sliding the plate.

---

4. Install the spring and detent into the striker block. Compress the spring and detent and slide the Challenger into position. Listen for the click of the detent springing into the counterbore on the backside of the charging handle.

---

5. Verify that the charging handle is secure by trying to slide the charging handle out of the slide.

---

6. Put the slide back on frame and the installation is complete.

Enjoy your new TANDEM KROSS "Challenger" Charging Handle!
